

**We pride ourselves on producing high quality recycled materials that can go straight back into manufacturing.**

## Quality resources

# Our recycling strategy is simple: Quality, quality, quality.

**Only if we produce and maintain high quality recycled commodities will we achieve a good price on the open market, not only for us, but also for our customers.**

Uniquely for our sector, Viridor has an in-house trading division for selling recycled commodity materials. Viridor Resource Management (VRM) has the tools and relationships to allow us to trade material ourselves to markets in the UK, Europe and internationally.

VRM is also fully responsible for the logistics, licensing and paperwork of material collected directly from Viridor recycling facilities – all two million tonnes of it.

Our primary focus is on four commodities: plastics, metal, glass and paper. Quality control is so high at our recycling facilities that customers buy these materials from Viridor rather than virgin stock, which has a positive impact on reducing dependence on natural resources.

This is a huge and complex operation made straightforward by our insight into the manufacturing sector and made more secure due to the backing of our parent company, Pennon Group.

Even when times are tough, if we maintain a quality product we can find a market for it, meaning great products for manufacturers and stable prices for our customers.

### Viridor Head Office

Viridor House  
Youngman Place  
Priory Bridge Road  
Taunton TA1 1AP
